Allergy weed Gajar Ghas (*Parthenium hysterophorus*) near drinking water source. The removal of Parthenium from such places is must. Photograph taken from Urban region of Raipur, Chhattisgarh (India). Parthenium is one of the ten worst weeds of the world. In India it is an exotic herb and causing great damage to the biodiversity. Parthenium must be managed before the flowering but it is noticed in general,after the flowering. Every plant is capable of producing thousands of viable seeds. Due to its attractive flowers it is named as White Top and Safed Topi.

Parthenium
